

BREAD IS DETRIMENTAL TO ANIMALS, PONDS, AND LAKES

1. Unconsumed amounts of bread will mold and endanger the wellbeing of birds and fish.
2. The naturally provided nutrition will not be consumed by the animals.
3. More birds will be drawn to the lakes leading to an overpopulation. Feces pollute the water in a way that cannot be balanced by natural cleaning.
4. Unconsumed amounts of bread break up, sink, and accumulate at the bottom of the lake. Decomposition of matter deprives the lake of oxygen. Fish suffocate.
5. Oxygen deficit is lethal for mussels, crabs, snails, and worms, which serve as a basic natural food source for fish and birds.
6. An increase in algae growth is caused by the release of carbon dioxide from the decomposition of the bread. The water turns green; it “blooms” and devastates the lake.

Help us keep the ponds and lakes clean and clear.

Please don't feed birds and fish.

Do not throw any bread in the water. Natural ecosystems provide enough nutrition.

Please consider the above . You will be actively participating in the protection of our ponds and lakes!

Please do not feed the birds!
